

ARCIL AR700 FORM-FILL-SEAL

The Arcil AR700 Form-Fill-Seal machine is built to make your production smoother, faster, and more reliable. Its high-accuracy dosing ensures every cup is filled correctly, while extended labeling capabilities help you deliver a premium look without slowing down your line. The AR700 handles a wide range of cup materials with ease, and its servo-controlled design keeps material flow consistent at every step. With presses and mechanics positioned above the plastic web, operators get better access and a cleaner workspace. Running at 40,000 to 60,000 cups per hour and designed to be user-friendly and accessible, the AR700 gives your team the performance and confidence they need to keep production moving.

WHY CHOOSE THE ARCIL AR700?

Features

Engineered for Performance

High Accuracy Dosing

Extended Label Capabilities

Wide Material Handling

Augmented Ergonomics & Easy Access

Applications / Industries:

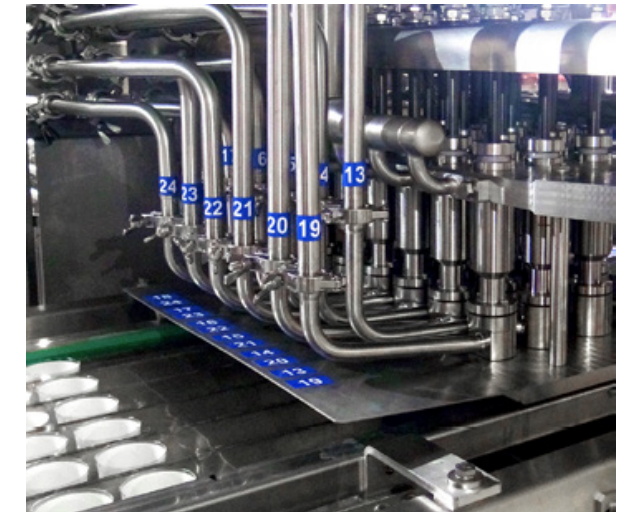

ARCIL AR700 FORM-FILL-SEAL

Engineered for performance and built to elevate modern dairy and food packaging, this FFS solution delivers customizable speeds up to 33 cycles per minute and production outputs reaching 60,000 cups per hour. It accommodates an exceptional range of cup formats—from Petit-Suisse to large cups, single cups to pre-cut multipacks—while rigorously controlling every parameter from heating to cutting.

High-accuracy dosing supports up to three fillers for multi-layer or creative products, handling both homogeneous and pumpable recipes with fruit pieces, all backed by Synerlink's global commitment to hygiene, integrity, and precision.

Extended labeling capabilities include thermoforming with or without labels, in-mold labeling with a vertical rotating device, and reliable handling of complex, high-conicity shapes across paper and plastic materials.

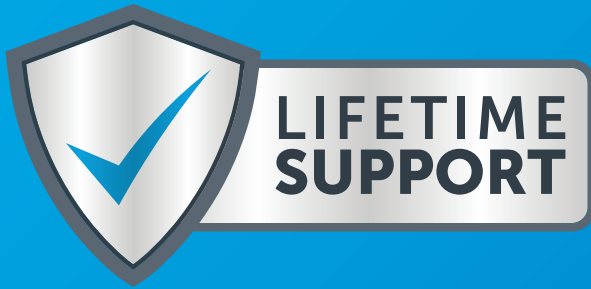

With adaptable heating steps, Snapcut cutting technology, and compatibility with virgin or recycled PET, PLA, PS, PP, and EVOH, the system offers unmatched material flexibility. Operators benefit from chest-height access, high visibility, and a customizable HMI that streamlines inspections, maintenance, cleaning, and production reporting—delivering a machine that's as ergonomic as it is powerful.
