

DESTRAPPER (DS 4/DS 5/DS 6/DS 8) **DEPALLETIZING**

Designed to eliminate a manual bottleneck at the front of the depalletizing process, Goldco Destrappers automate the removal of plastic straps from pallet loads. The system replaces time-consuming and hazardous manual cutting with a controlled, integrated process that prepares loads for efficient downstream handling.

WHY CHOOSE THE GOLDCO DESTRAPPER

Built for operations focused on labour reduction, safety, and line efficiency, the destrapper automates a traditionally manual process that can slow throughput and introduce risk. By handling strap detection, cutting, and disposal automatically, the system enables uninterrupted flow into the depalletizing process.

Features

- Automated strap detection eliminates manual identification and handling
- Quick-disconnect sensors simplify maintenance and reduce downtime
- Integrated touchscreen controls improve operator visibility and diagnostics
- Automated strap collection and disposal supports efficient waste handling
- Reduces labor by eliminating manual strap removal and feeding
- Enables unattended operation for extended production periods
- Low power consumption supports efficient system operation
- Precision cutting ensures clean removal and consistent processing
- Handles variable pallet heights without adjustment
- Easy access design simplifies cleaning and maintenance
- Configurable system supports multiple strap formats
- Improves safety by eliminating manual cutting of tensioned straps

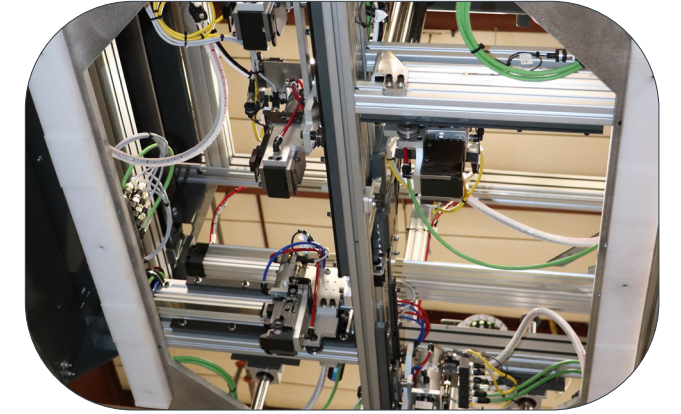

Operation

As pallet loads enter the system, stabilizers secure the load while cutting heads automatically locate and sever straps. The straps are collected, processed, and directed into a disposal system, ensuring clean and efficient removal.

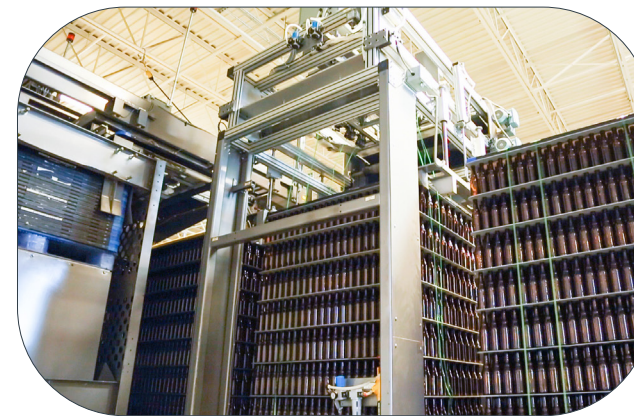

The pallet then advances seamlessly to the next stage, supporting continuous flow into top frame removal and depalletizing without manual intervention.

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
