

# CENTURION 3000 AUTOMATIC BULK PALLETIZER

Engineered for high-speed can production environments, the Centurion 3000 Automatic Bulk Palletizer is designed to maintain consistent throughput while ensuring reliable container handling. Built for the demands of modern can manufacturing, it delivers repeatable performance and pallet quality across continuous operations.

# WHY CHOOSE THE GOLDCO CENTURION 3000 AUTOMATIC BULK PALLETIZER

Designed for operations where uptime and pack quality are critical, the Centurion 3000 combines continuous-motion palletizing with automated functions to reduce operator intervention and maintain production flow. By automating pallet change, layer cycles, and layer pad placement, the system supports consistent output while allowing operators to focus on upstream production quality.

## Features

- Continuous-motion hoist design supports stable, high-throughput palletizing
- All-electric/pneumatic operation reduces mechanical complexity
- Simplified controls improve usability and reduce operator training requirements
- Servo-driven layer positioning ensures consistent, repeatable pallet builds
- Integrated squaring capabilities maintain load stability and pack quality
- Automated pallet and layer functions reduce manual intervention
- Accessible HMI design supports fast operation and troubleshooting

## Application Description

The system uses integrated pattern forming to deliver consistent, void-free layers into the palletizing process, ensuring stable load formation. Servo-driven layer pad handling accurately positions pads to protect containers while maintaining line speed.

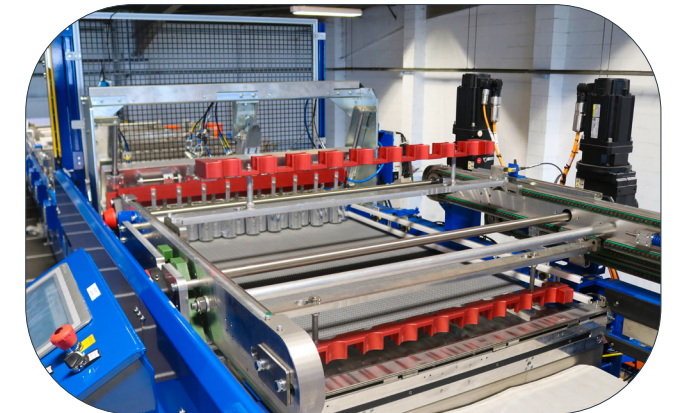

Automated pallet handling minimizes downtime between loads, supporting continuous operation while improving overall line efficiency. Integrated controls and safety systems enable consistent operation in high-demand production environments.

## Available Options

- Servo-driven layer retainer ensures stable layer placement and reduces product tipping

# MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
