

CENTURION 4000 AUTOMATIC BULK PALLETIZER

Designed for high-speed can lines with increasing format variability, the Centurion 4000 Automatic Bulk Palletizer delivers flexible palletizing across multiple pallet sizes, can formats, and top frame configurations. The system enables efficient operation in environments where frequent changes and high throughput must be managed simultaneously.

WHY CHOOSE THE GOLDCO CENTURION 4000 AUTOMATIC BULK PALLETIZER

Built for operations managing multiple SKUs and pallet configurations, the Centurion 4000 eliminates manual changeover complexity through automated adjustments. This enables faster transitions between formats while maintaining consistent production flow and pallet quality.

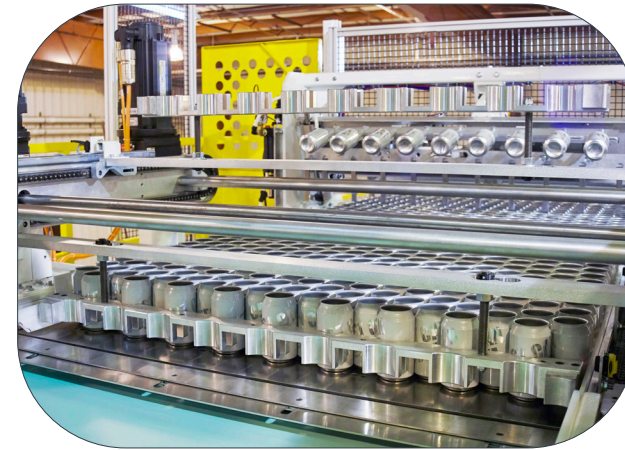

Features

- Integrated layer squaring ensures consistent pallet quality
- Supports multiple pallet sizes and container formats
- Automated pallet magazine improves workflow efficiency
- Simplified HMI enables fast operation and changeovers
- Adjustable frame handling supports varying top frame designs
- High-capacity layer pad handling reduces operator interaction

Application Description

The system enables automatic adjustment between pallet and product configurations, eliminating manual intervention and reducing downtime. Integrated drives and positioning systems ensure consistent operation across different formats.

Automated frame handling and synchronized layer placement improve efficiency during pallet change, while maintaining alignment and preventing product instability. The system supports continuous operation with minimal disruption during product transitions.

Can stabilizer

Airliner void-free pattern forming

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
