

FORTIS 3000 HIGH-LEVEL BULK DEPALLETTIZER

Designed for high-volume container operations, the Fortis 3000 High-Level Bulk Depalletizer delivers continuous removal of empty containers while maintaining consistent flow into production lines. Integrated dunnage handling ensures efficient separation of layer pads, top frames, and pallets, supporting uninterrupted operation in 24-hour production environments.

WHY CHOOSE THE FORTIS 3000 HIGH-LEVEL BULK DEPALLETZER

Built for high-speed, continuous production environments, Fortis 3000 combines automated depalletizing with integrated dunnage handling to reduce labor requirements and improve line efficiency. Its modular design enables rapid installation and configuration while supporting varying line requirements and plant layouts.

Features

- Servo-driven hoist supports consistent, controlled pallet handling
- Dual sweep bar design ensures stable and efficient product movement
- Integrated sheet tray enables continuous operation without interruption
- All-electric/pneumatic system reduces maintenance requirements
- Automated dunnage removal improves process efficiency
- Multiple gripper configurations support varying dunnage formats
- Robotic dunnage handling system separates materials for efficient removal

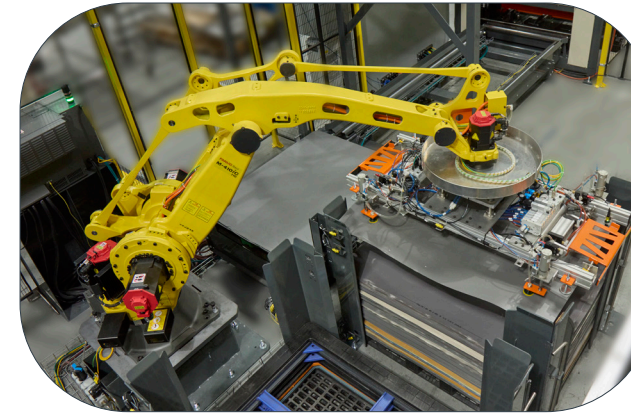

Application Description

High-speed sweep systems maintain controlled product handling while removing layers efficiently from pallets. Integrated dunnage handling removes and stages layer pads and top frames during operation, reducing manual intervention.

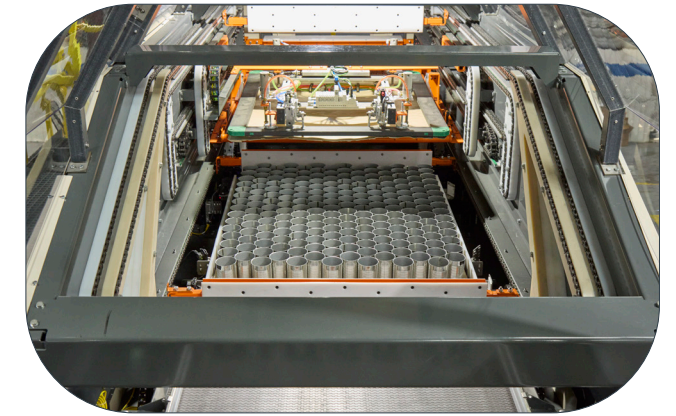

Separated dunnage materials are automatically transferred to designated locations for removal, ensuring continuous flow and improved line efficiency. The system can be configured to integrate with upstream and downstream handling equipment for a complete end-of-line solution.

Available Options

- Automatic sheet leveler supports smooth product transfer
- Recipe-driven positioning enables faster changeovers

Sweeping a layer of cans onto accumulator

Empty cans infeeding into the system

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
