

MAXIMUS (500/510) CASE PALLETIZER

Developed to meet evolving production demands, the Maximus series delivers a high-level case palletizing solution that balances compact footprint, flexibility, and throughput. Designed with direct input from customers and industry expertise, the system addresses the need for efficient palletizing in space-constrained environments.

With advanced layer forming and an intuitive operator interface, Maximus supports consistent load building while simplifying operation. It is ideally suited for food, household, chemical, personal care, and select beverage applications, while remaining flexible enough for a range of mid-speed palletizing environments.

WHY CHOOSE THE STACT MAXIMUS (500/510) CASE PALLETIZER

Maximus is designed for operations that require reliable palletizing performance with simplified installation and maintenance. Its modular construction and split-for-shipment design allow for fast deployment, reducing installation time and site disruption.

Once installed, the system supports efficient operation through integrated product flow—from infeed to layer forming, pallet positioning, and discharge—ensuring consistent pallet quality while minimizing cycle time between loads.

Features

- Split-for-shipment design enables faster installation and easier plant integration
- Advanced operator interface simplifies pattern setup and reduces recovery time
- Flexible layer forming supports a wide range of products and SKU variations
- Open machine design improves visibility for monitoring and troubleshooting
- Adaptable layout integration supports different end-of-line configurations
- Integrated pallet dispenser automates pallet handling and reduces manual labor
- PackML readiness supports system integration with plant controls

Available Options

- Layer table option to support additional product stabilization during pallet formation

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
