

## ROBOTIC CASE PALLETIZER

Designed for packaging operations managing multiple products and changing production requirements, the robotic case palletizer provides a flexible alternative to traditional palletizing systems. With proven deployments across a range of industries, the system adapts to both frozen and ambient environments while supporting varying speeds and handling requirements.

Intermittent and continuous motion capabilities allow the system to match line performance, while a range of proven end-of-arm tooling configurations ensures reliable handling across different case types and packaging formats.

# WHY CHOOSE THE STACT ROBOTIC CASE PALLETIZER

Built for operations balancing throughput, flexibility, and floor space constraints, the robotic case palletizer enables multiple products to be managed within a single compact cell. This reduces system complexity while supporting SKU growth and line expansion.

Electro servo-driven performance ensures consistent operation with reduced mechanical wear, lowering maintenance requirements while maintaining long-term reliability compared to conventional systems.

## Features

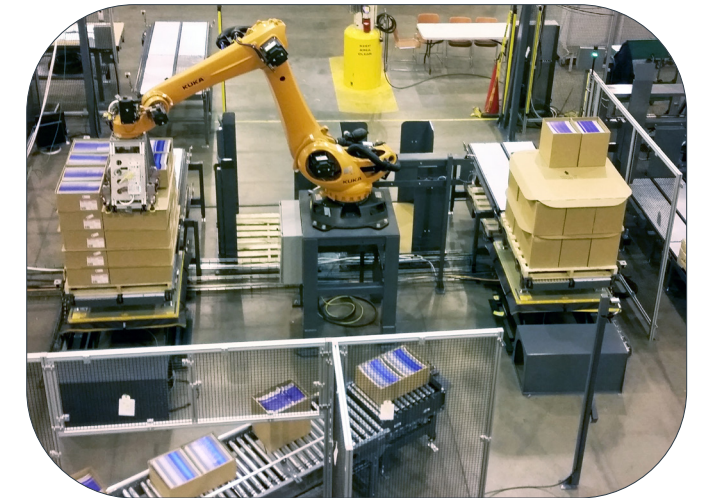

- Three-strand pallet conveyor design ensures consistent load handling and stable pallet movement
- Centralized, accessible pneumatics simplify maintenance and reduce downtime during service
- Flexible operator interface positioning improves line visibility and operational control
- Open architecture pallet dispenser supports varying pallet sizes and tolerates variable pallet quality
- Integrated safety system protects key loading and discharge areas while maintaining accessibility
- External programming access enables fast adjustments without interrupting operation

## Available Options

- Multi-line infeed and discharge configurations support higher throughput operations
- All-electric operation reduces maintenance complexity and improves consistency
- Freezer-rated option ensures performance in cold storage environments
- Product Builder software enables faster pattern setup and changeover
- Multiple robot platform options allow alignment with customer standards

# MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
