

ROBOTIC PALLETIZER

Built for operations that manage diverse products and packaging types, the robotic palletizer delivers flexible, cell-based automation across a wide range of applications. From bags and drums to pails, scrap bales, and specialty trays, the system adapts to varying product sizes and handling requirements without dedicated equipment for each format.

Designed to support industries including Paper, Household, Chemical, Industrial Manufacturing, and Food, this solution replaces manual handling and rigid automation with a scalable robotic approach that improves consistency while reducing reliance on labor in demanding environments.

WHY CHOOSE THE STACT ROBOTIC PALLETIZER

Designed for operations looking to automate multiple packaging types within a limited footprint, this robotic palletizer combines compact cell design with flexible product handling. The system enables one solution to manage different SKUs and packaging formats, reducing the need for dedicated lines.

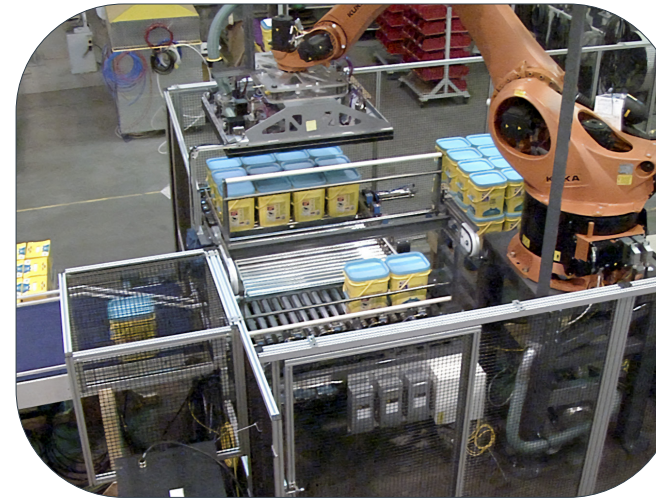

With electro servo-driven technology, the system minimizes maintenance requirements while maintaining consistent performance in continuous operation. The result is a palletizing solution that improves uptime and reliability compared to conventional equipment.

Features

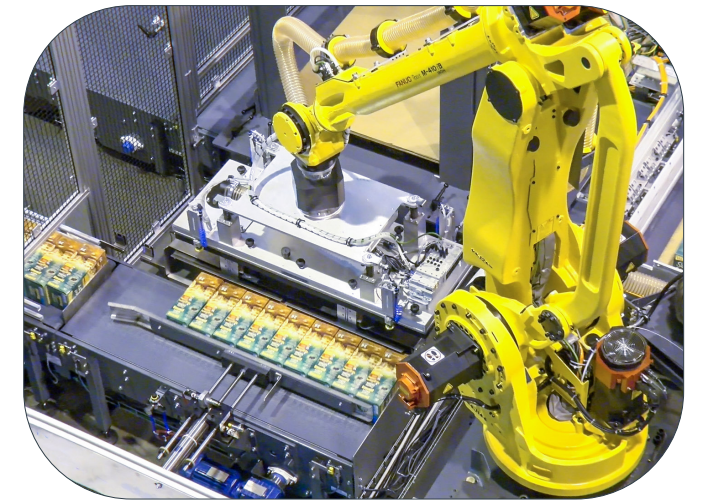

- Integrated infeed conveyor supports stable and consistent product presentation
- End-of-arm tooling is customized to ensure reliable handling across varying product types
- Automated dunnage handling improves pallet stability and reduces manual intervention
- Category-3 safety architecture supports safe operation in high-throughput environments
- Multi-layered safety systems protect operators while maintaining production flow

Available Options

- Freezer-rated configuration to support temperature-sensitive operations
- Flexible robot platform selection to align with customer standards and preferences

MORE THAN MACHINES. A PARTNER IN PERFORMANCE.

BW Packaging supports your operation beyond installation, providing global service, parts availability, training, and system upgrades to keep your palletizing system running at peak performance as your production needs evolve.
